ECO FRIENDLY

Eco-friendly products are products that do not harm the environment, whether in their production, use or disposal.

Some of these going green products when in use, help conserve energy, minimize carbon footprint or the emission of greenhouse gases, and does not lead to substantial toxicity or pollution to the environment.

Other green products are biodegradable, recyclable or compostable. Hence, they do not harm the environment or upset the ecological balance when they are disposed of.

There are also eco friendly products that are made out of recycled materials. These recycle products help reduce the need for new raw materials and the amount of waste sent to landfills and incinerators (because waste can be diverted to making recycled products).

In turn, demand for these recycle products will also help complete the recycling loop, and sustain the recycling industry.

If you believe in being environmentally friendly then spread your beliefs by using or gifting this notebook. Made from recycled paper, not only is it eco-friendly, it's also extremely useful as it comes with a bunch of sticky notes and tape flags in various sizes!
